CR308 Sound Level Meter

Features

- Calibrated Class 2 Sound Level Meter
- Fast and Slow response
- A and C frequency weighting
- Back-light for darker environments
- Min, Max and Peak measurement
- AC and DC outputs
- Calibration certificate included

Applications

- Basic noise checks
- Alarm installation
- Fire alarm testing
- Machinery and factory noise (see notes below)

Overview

The CR308 is an easy to use sound level meter that meets the international standards to Class 2 / Type 2, as required by many noise measurement standards. It measures the Fast or Slow sound level with both "A" and "C" frequency weightings.

Standards

- IEC 61672 Class 2
- ANSI S1.4 and IEC 60651 to Type 2

It is essential that a sound level meter meets these standards if it is to be used for any important measurements, particularly those that involve any other legal purposes. The CR308 meets the strict demands of IEC 61672, IEC 60651 and ANSI S1.4 and is provided with a Calibration Certificate at no extra cost, so you can make your noise measurements with confidence.

Noise Measurements

The CR308 measures the instantaneous sound level with either **A** or **C** weighting. Most noise regulations require **A** weighting. It also has both **Fast** and **Slow** time response. Many regulations require **Fast** but some, like the USA OSHA regulations use **Slow** as it is easier to average by eye.

The meter also provides the Maximum and Minimum readings for whichever weightings are selected. A Reset button is used to clear and start the next min/max measurement.

Outputs

An AC output and optional DC output mean this meter can be connected to a level recorder, PC equipped with an A/D converter or integrated with another data logging system.

See Specifications tab for more details about the standards and noise measurement range.
